RE: Southeast Rockford Groundwater Contamination Site
Groundwater Monitoring Report
Semi-Annual Monitoring Event – November 2016

Ms. Kirchner/Mr. Conrath:

Nationwide Environmental Services, Inc. (NES) is submitting the semi-annual monitoring report presenting the analytical data and data interpretation summary for groundwater quality monitoring samples collected at the Southeast Rockford Groundwater Contamination Site (the Site) during the **November 2016** semi-annual monitoring event. The groundwater monitoring data obtained for the current reporting period will also be submitted in an MS Excel™ file separately via e-mail.

Please contact me at telephone (303) 232-2134 if you have any questions regarding the information provided or require any additional information.

Sincerely,

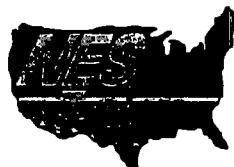

William B. Dotterer,
Sr. Project Manager

cc: Nadine Miller, City of Rockford

**Southeast Rockford Groundwater Contamination Site
Groundwater Monitoring Report
Semi-Annual Monitoring Event - November 2016**

May 2017

Nationwide Environmental Services, Inc.

Southeast Rockford Groundwater Contamination Site Groundwater Monitoring Report

Overview

The second semi-annual monitoring event for calendar year 2016 was performed at the Southeast Rockford Groundwater Contamination Site (Site) in November. The field sampling activity and analytical procedures utilized for the current monitoring event were performed in accordance with the amended Quality Assurance Project Plan (QAPP, 2008) and the amended Field Sampling Plan (FSP, 2010).

The principle intent of the Site groundwater monitoring program is: (1) to monitor the status of the affected aquifer within the Site extents relative to groundwater clean-up standards established under the Record of Decision (ROD), and (2) to the extent possible under the groundwater monitoring program scope, monitor the influence of designated Site source areas and associated remediation activities on aquifer restoration goals.

The following report presents the results of the November 2016 monitoring event along with cumulative results for prior monitoring events conducted at the Site, and a comparison of groundwater monitoring data obtained during the current monitoring event to analytical data from the prior monitoring event to identify any notable change in groundwater conditions which may have occurred.

The results of the current groundwater monitoring event, and pertinent Site information and groundwater monitoring data are presented in the report as follows:

- **Figure 1** - Site groundwater monitoring network
- **Figure 2** - Concentration trend graphs
- **Table 1** - Summary of analytical results for samples collected in current monitoring event
- **Table 2** - Historical groundwater monitoring network analytical results
- **Table 3** - Groundwater elevations for the current monitoring event
- **Table 4** - Monitoring well inventory
- **Appendix A** - Validated laboratory data sheets and data quality summaries for the current monitoring event
- **Appendix B** - Field sampling sheets for the current monitoring event

NES continues to coordinate efforts with IEPA to share groundwater data obtained from common monitoring well locations at the Site. NES is not aware of IEPA sample collection from Site monitoring locations for the current reporting period and no comparative Site data from IEPA is presented in this report.

The current monitoring well inventory for the Site is presented in **Table 4**. The monitoring well inventory is revised, as necessary, to match the current condition of the individual monitoring wells comprising the Site monitoring well network. For example, repairs or maintenance performed for monitoring well locations that result in changes to the wellhead elevation will necessitate revisions to the monitoring well inventory.

Monitoring Event Results

The field sampling sheets presenting pertinent field information and site conditions for the current monitoring event are provided in **Appendix B** of this report. The following field conditions were noted to occur during the current semi-annual monitoring event:

- MW-102A, MW-102B, & MW-102C – These wells are located in the storage yard for the Owens Corning Plant in an area that was re-paved with asphalt. Following the November sampling event, the flush protective casings for these groundwater monitoring wells were replaced with similar flush casings, as described further in a subsequent section of this report.
- MW-205A & MW-205B – These wells are in the area of the ongoing construction of the Rock River Water Reclamation District's (RRWRD) stormwater retention pond. Following the current sampling event, these groundwater monitoring wells were converted from flush protective casings to above ground casings to improve well head access and maintenance, as described further in a subsequent section of this report.
- MW-101D, MW-113B, MW-117D, MW-119, & MW-206C – The groundwater from these wells exhibited sporadic field dissolved oxygen (DO) values during sampling to the point that the target criteria of 10% variation within the last three readings was not possible to achieve. These monitoring wells are in disparate locations across the Site and no specific cause for the field DO measurements was identified.
- MW-203 was sampled with a portable low flow sampling pump. The permanent well pump installed in the well has been removed by an unknown party.

The analytical results for groundwater samples collected during the current monitoring event are summarized in **Table 1**. Included in **Table 1** are the concentrations for the chemicals of concern (COC) identified in Section VI of the Site Record of Decision (ROD) and for vinyl chloride. Historical analytical results for groundwater samples collected from the Site monitoring network, by monitoring well location, are presented in **Table 2**. Validated laboratory data sheets and data quality summaries including relevant analytical quality assurance/quality control (QA/QC) are provided in **Appendix A**.

Overall, total VOC concentrations have generally decreased across the Site since inception of the long-term monitoring program in March 1999. The ratios of parent VOC compound concentrations to associated breakdown product concentrations indicate biodegradation, comprising a component of natural attenuation, may be occurring at the Site. The presence of vinyl chloride and chloroethane in groundwater samples are further indicators that natural attenuation may be occurring at the Site.

A series of graphs depicting historical total volatile organic compound (VOC) concentrations for select monitoring wells are presented on **Figure 2** to show total VOC concentration trends occurring at these monitoring locations. The monitoring locations used for comparison of historical analytical data were selected based on their proximity to designated source areas. Although the graphs depict analytical results from 1999 to the present, the evaluation presented in this report for total VOCs in groundwater at the Site is principally devoted to the identification of changes, if any, from the previous semi-annual sampling event conducted in June 2016.

The graphs on **Figure 2** reveal that fluctuations in total VOC concentrations in groundwater have occurred over the period that samples have been collected at the Site under the remedial action. The causal factors for VOC concentration variability are presumed to be source area remedial activities performed by others, variation in groundwater levels and flowpaths, precipitation events resulting in aquifer recharge, etc. However, NES is not aware of any specifics that would allow an interpretation of the data, other than the general observations presented in this report.

Monitoring Data Review

The status of total VOC concentrations at certain monitoring well locations, relative to the previous monitoring event (June 2016), are summarized below. The noted monitoring well locations are located proximate to, or down-gradient from, identified source areas. The Site source areas are segregated by general geographic location within the Site for the purpose of this report.

East-Source Area 7

The majority of total VOC concentrations reported for groundwater monitoring locations near the Area 7 source area have generally decreased or remained relatively stable from the previous sampling event, except as noted. Relative increases were noted for total VOC concentrations in water quality samples collected from MW-101A, MW-101C, MW-101D, and MW-102A/B from the previous monitoring event. Several VOCs were reported above the maximum contaminant level (MCL) at the monitoring well cluster MW-101A/B/C/D, MW-102A, and MW-133B/C. During the previous monitoring event, VOCs were reported above MCLs at these same locations.

North-Source Areas 4, 9, 10, & 11

Evaluation of the analytical results for the current monitoring event resulted in the following observations. Relative increases in total VOC concentrations were noted in the water quality samples collected from MW-16, MW-113B, MW-114A/B, MW-121, MW-201, and MW-203 from the previous monitoring event. Several VOCs were reported above the MCL at monitoring locations MW-16, MW-113A/B, MW-114A, MW-121, and MW-124. During the previous monitoring event, VOCs were reported above MCLs at these same locations, with the exception of MW-114A.

West-Rock River

Evaluation of the analytical results for the current semi-annual monitoring event resulted in the following observations for the monitoring locations proximate to the Rock River. Relative increases in total VOC concentrations did occur in the water quality samples collected from MW-117C, MW-204, and MW-206C from the previous monitoring event. Several VOCs were reported above the MCL at MW-117B/C/D, MW-204, MW-205A/B, MW-206A/B/C, and MW-207. During the previous monitoring event, VOCs were reported above MCLs at these same locations.

Groundwater Monitoring Network Maintenance

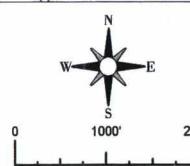

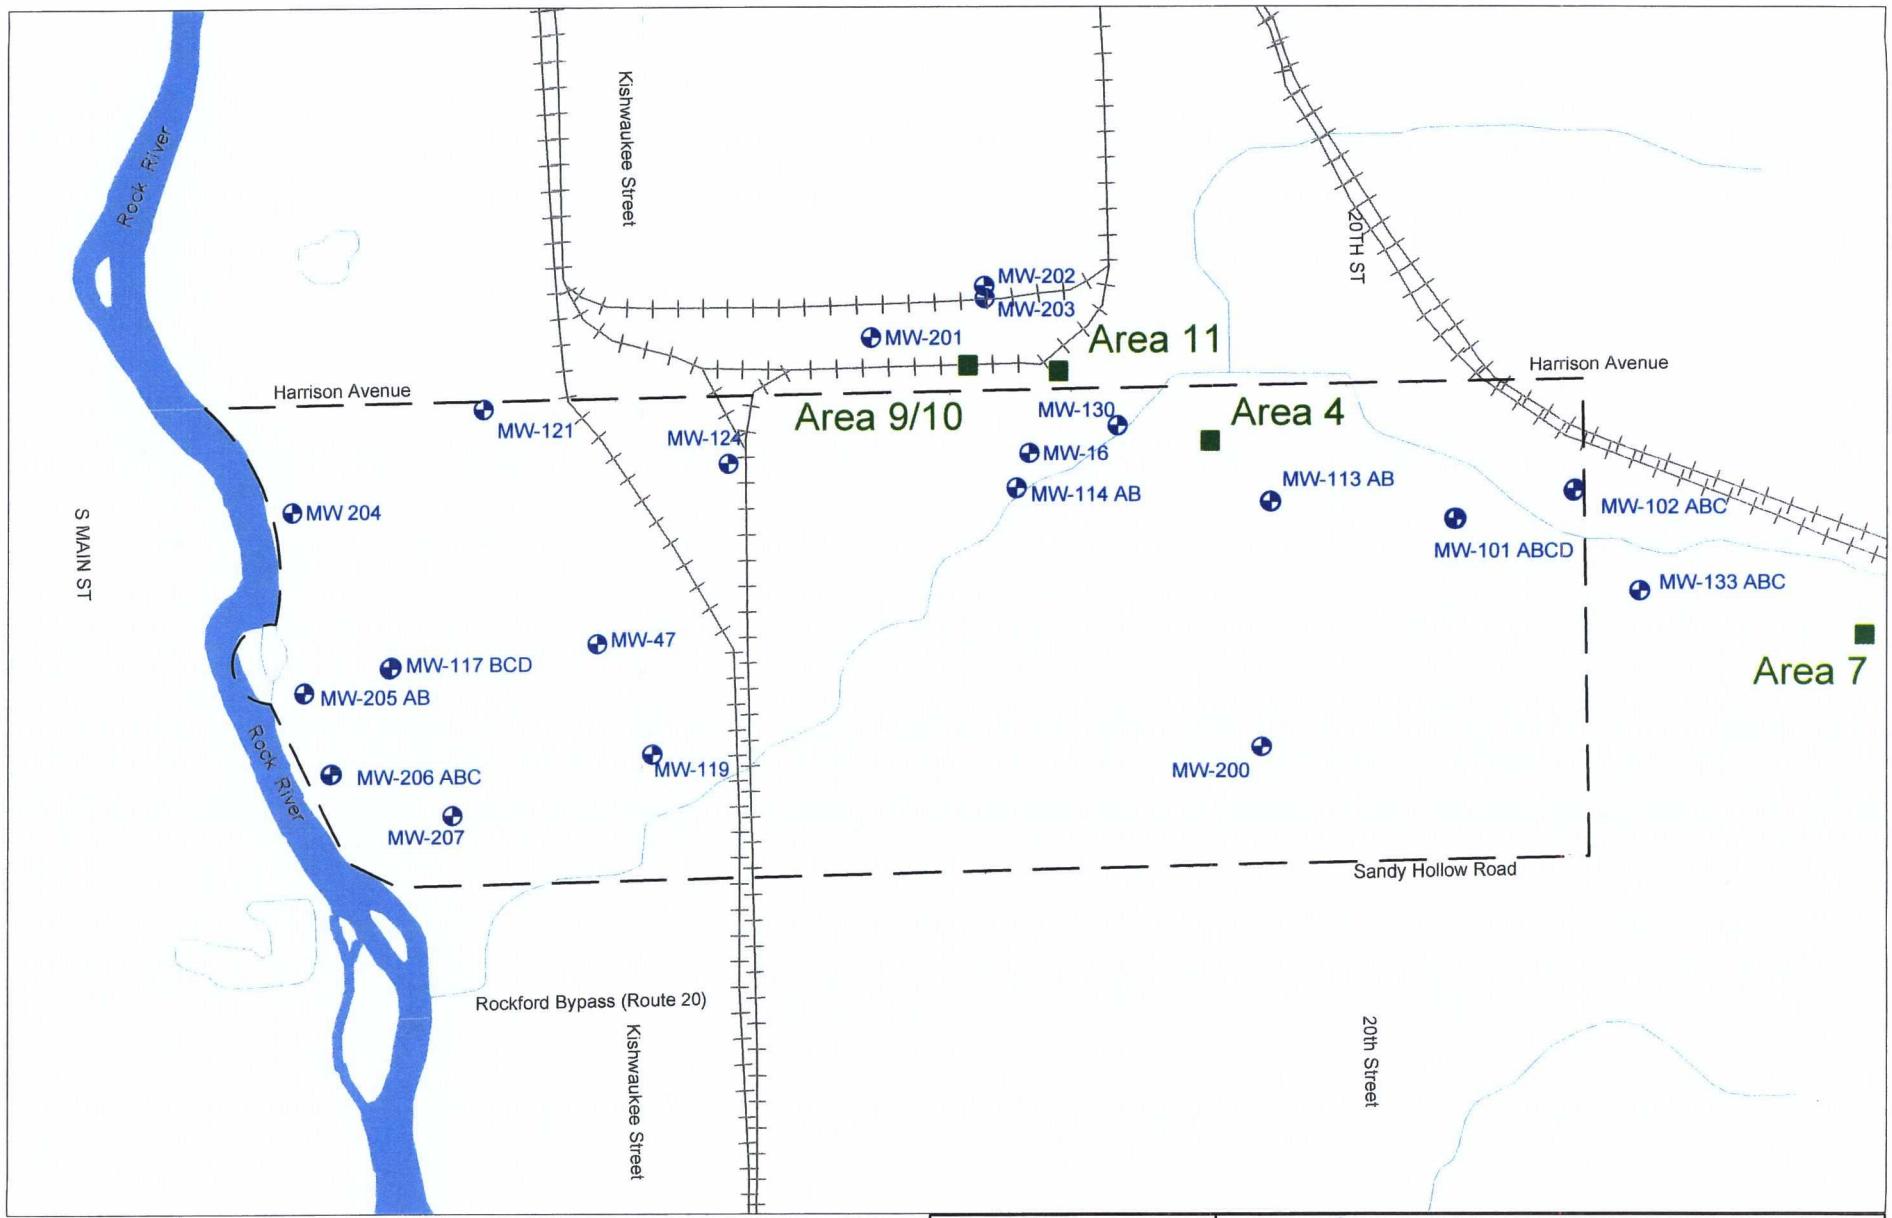

Maintenance performed on the groundwater monitoring network since the June 2016 monitoring event involved the following activity.

MW-102A, MW-102B, & MW-102C: These monitoring wells are located in the storage yard for the Owens Corning Plant in an area that has been re-paved with asphalt, and the wellhead locations were covered by asphalt “cold patch”. Maintenance work completed for these well locations involved the removal of dedicated low flow sampling pumps from the wells for later reinstallation, saw cutting asphalt surrounding wellhead in an approximately 2’x2’ area, excavation and removal of old flush-mount

protective casings from MW-102A & MW-102C, installation of new flush-mount protective casings, and replacement of a bolt down casing on MW-102B. This work was completed in late November 2016.

MW-205A & MW-205B: These monitoring wells are in an area of ongoing construction for the *Rock River Water Reclamation District's* (RRWRD) storm water retention pond. An earthen berm placed as part of the construction activity covered the wellheads with 12" to 18" of topsoil. Maintenance work completed for these well locations involved the removal of dedicated low flow sampling pumps from the wells for later reinstallation, existing flush casings were removed by digging soil surrounding casings, inner casings were extended with a PVC riser, steel above ground protective casings were installed over the riser and cemented into place with the riser measurements increasing the elevation of the inner casings (MW205A: 3.29 ft. and MW205B: 3.50 ft.), sampling pumps and tubing were re-installed without modifications. This maintenance work was completed in early December 2016.

| TCE | Trichloroethene |
| VC | Vinyl Chloride |
| Total VOCs | Sum of Total Volatile Organic Compound Concentrations |

B Concentration is less than the reporting limit but greater than the instrument detection limit.

D Reported concentration is based on an analysis requiring a secondary detection limit.

E The associated value exceeds the calibration range.

J The reported concentration is estimated.

U Analyte was not detected at or above the reporting limit.

Sample Type reported as undiluted, investigative sample unless stated otherwise

Fld Dupe Field Duplicate

Data Validation Summary
Laboratory Data Sheets

Data Quality Control Criteria Review Summary**SDG Number:** 1611304**Project Number:** 1016-2**Site:** SE Rockford, 36th Event**Contractor Lab:** TriMatrix (Grand Rapids, MI)**Validator:** Brian LaFlamme**Validation Date:** 03/29/17**Sample Matrix:** Water**Sample Date:** 11/11/16 – 11/13/16**Analytical Methods:** EPA SW-846 Method 8260B**Sample Designations:**

| | | | |
|----------------|---------------|----------------|---|
| MW-47 | MW-124 | MW-203 | MW-206C |
| MW-117B | MW-130 | MW-205A | MW-207 |
| MW-117C | MW-200 | MW-205B | FD-1 (field duplicate of MW-201) |
| MW-117D | MW-201 | MW-206A | Trip Blank |
| MW-119 | MW-202 | MW-206B | |

The analytical data were reviewed in accordance with the analytical methods, SW-846 validation guidelines, and the Environmental Protection Agency (EPA) Contract Laboratory Program (CLP) National Functional Guidelines. The review included comparing quality control (QC) values provided on the laboratory QC forms to method QC criteria. Review of the raw data was not performed.

Quality Control Summary

| QC Review Item | VOA |
|---|-----|
| Completeness | X |
| Case Narrative | X |
| Chain of Custody (COC) Forms | X |
| Sample Preservation | X |
| Holding Times | X |
| Laboratory Blank Results | 1 |
| System Monitoring Compounds (Surrogate) Results | X |
| Matrix Spike/Matrix Duplicate (MS/MSD) Results | X |
| Laboratory Control Sample (LCS) Results | X |
| Method Specific Quality Control (QC) Results * | X |
| System Performance | 2 |
| Field Quality Control Results # | 3 |
| Other | 4 |

X Acceptable, no qualification necessary

NR Not required

See validation summary comment

NA Not applicable

*) The reviewer has indicated in the comments, if necessary, the method specific QC results included in the data package that were reviewed.

#) Field QC may include field duplicates, trip blanks, rinse blanks, field blanks, and equipment blank samples as required by project specific criteria.

Data for the above samples are:

Is action required by the Project Manager?

- | | | |
|---|------------------------------|--|
| <input type="checkbox"/> Acceptable for use | Yes <input type="checkbox"/> | No <input checked="" type="checkbox"/> |
| <input checked="" type="checkbox"/> Acceptable for use as qualified | | |
| <input type="checkbox"/> Unacceptable for use | | |

Data Validation Summary Comments:

- 1. Laboratory Blank Results** – Four compounds were detected in the method blank for QC batch 1612355. The following table provides the detected compounds and qualifiers applied to the investigate results, if necessary.

| Compound | Method Blank Result ($\mu\text{g/l}$) | Affected Samples | Qualifier(s) |
|---------------------|--|-------------------|--------------|
| 1,2-Dichlorobenzene | 0.16 J | N/A | N/A |
| 1,4-Dichlorobenzene | 0.29 J | N/A | N/A |
| Bromomethane | 0.49 J | N/A | N/A |
| Carbon Disulfide | 0.30 J | MW-206A & MW-206B | 5 UB |

- 2. System Performance** – The corresponding continuing calibration verification (CCV) sample for Bromomethane had a recovery that exceeded the upper control limit of the method. However, because Bromomethane was not detected in any associated investigative sample, qualification is not necessary.

The corresponding CCV sample for 1,2-Dibromo-3-chloropropane had a recovery that exceeded the upper control limit of the method. However, because 1,2-Dibromo-3-chloropropane was not detected in any associated investigative sample, qualification is not necessary.

- 3. Field Quality Control Samples** – The relative percent difference (RPD) is not necessarily calculated if both the primary and duplicate results are not five times greater than the reporting limit. However, the RPD between the investigative and duplicate samples was less than or equal to 9%. This value only considers the comparison of two concentrations reported above the reporting limit. Qualification is not necessary.
- 4. Other** – The laboratory noted a discrepancy on the chain of custody form (COC) and vial during this sampling event. After conferring with the field person it was noted that MW-124 was collected at 1457 yet mislabeled as MW-121 on the COC, and mislabeled as MW-119 on the vials. The laboratory was notified of the correction. Data were not compromised and qualification is not necessary.

OVERALL ASSESSMENT OF DATA

The TriMatrix Work Order Report # 1611304 is 100 percent complete. The data usability is based on EPA's guidance documents. No problems were identified with reported data and analytical performance was within specified limits. The data are acceptable and meet the project's data quality objectives.

Data Quality Control Criteria Review Summary**SDG Number: 1611379****Project Number: 1016-2****Site:** SE Rockford, 36th Event**Contractor Lab:** TriMatrix (Grand Rapids, MI)**Validator:** Brian LaFlamme**Validation Date:** 03/29/17**Sample Matrix:** Water**Sample Date:** 11/16/16 – 11/17/16**Analytical Methods:** EPA SW-846 Method 8260B**Sample Designations:**

| | | | |
|----------------|----------------|---------------|---|
| MW-113A | MW-133A | MW-136 | FD-3 (field duplicate of MW-124) |
| MW-113B | MW-133B | MW-204 | Trip Blank |
| MW-121 | MW-133C | | |

The analytical data were reviewed in accordance with the analytical methods, SW-846 validation guidelines, and the Environmental Protection Agency (EPA) Contract Laboratory Program (CLP) National Functional Guidelines. The review included comparing quality control (QC) values provided on the laboratory QC forms to method QC criteria. Review of the raw data was not performed.

Quality Control Summary

X Acceptable, no qualification necessary

NR Not required

See validation summary comment

NA Not applicable

*) The reviewer has indicated in the comments, if necessary, the method specific QC results included in the data package that were reviewed.

#) Field QC may include field duplicates, trip blanks, rinse blanks, field blanks, and equipment blank samples as required by project specific criteria.

Data for the above samples are:

Is action required by the Project Manager?

 Acceptable for useYes No Acceptable for use as qualified Unacceptable for use

Data Validation Summary Comments:

- 1. Laboratory Blank Results** – Three compounds were detected in the method blank for QC batch 1612425. The following table provides the detected compounds and qualifiers applied to the investigate results, if necessary.

| Compound | Method Blank Result ($\mu\text{g/l}$) | Affected Samples | Qualifier(s) |
|---------------------|--|------------------|--------------|
| 1,2-Dichlorobenzene | 0.12 J | N/A | N/A |
| 1,4-Dichlorobenzene | 0.20 J | N/A | N/A |
| Methylene Chloride | 0.28 J | MW-133B | 25 UB |

Four compounds were detected in the method blank for QC batch 1612507. The following table provides the detected compounds and qualifiers applied to the investigate results, if necessary.

| Compound | Method Blank Result ($\mu\text{g/l}$) | Affected Samples | Qualifier(s) |
|---------------------|--|------------------|--------------|
| 1,2-Dichlorobenzene | 0.18 J | N/A | N/A |
| 1,4-Dichlorobenzene | 0.31 J | MW-204 | 1 UB |
| Bromomethane | 0.34 J | N/A | N/A |
| Carbon Disulfide | 0.27 J | N/A | N/A |

- 2. Matrix Spike/Matrix Duplicate (MS/MSD) Results** – The MS and MSD recovery was lower than the lower control limit for 1,2-Dibromo-3-chloropropane in QC batch 1612425. However, because 1,2-Dibromo-3-chloropropane was not detected in any associated investigative sample, qualification is not necessary.
- 3. System Performance** – The corresponding continuing calibration verification (CCV) sample for 1,2-Dibromo-3-chloropropane had a recovery that exceeded the upper control limit of the method. However, because 1,2-Dibromo-3-chloropropane was not detected in any associated investigative sample, qualification is not necessary.
- 4. Field Quality Control Samples** – Two compounds were detected in the trip blank associated with the investigated samples for the sample delivery group (SDG) 1611379. The following table provides the detected compounds and qualifiers applied to the investigate results, if necessary.

| Compound | Method Blank Result ($\mu\text{g/l}$) | Affected Samples | Qualifier(s) |
|--------------------|--|------------------|-----------------|
| Acetone | 14 J | MW-136 | 20 UB |
| Methylene Chloride | 0.80 J | MW-133C & MW-136 | 5 UB |
| | | MW-133B | NA ¹ |

¹This investigate sample was already qualified because of a detection of methylene chloride in the method blank.

The relative percent difference (RPD) is not necessarily calculated if both the primary and duplicate results are not five times greater than the reporting limit. However, the RPD between the investigative and duplicate samples was less than or equal to 32%. This value only considers the comparison of two concentrations reported above the reporting limit. Qualification is not necessary.

OVERALL ASSESSMENT OF DATA

The TriMatrix Work Order Report # 1611379 is 100 percent complete. The data usability is based on EPA's guidance documents. No problems were identified with reported data and analytical performance was within specified limits. The data are acceptable and meet the project's data quality objectives.

Data Quality Control Criteria Review Summary**SDG Number:** 1611486**Project Number:** 1016-2**Site:** SE Rockford, 36th Event**Contractor Lab:** TriMatrix (Grand Rapids, MI)**Validator:** Brian LaFlamme**Validation Date:** 03/30/17**Sample Matrix:** Water**Sample Date:** 11/26/16 – 11/28/16**Analytical Methods:** EPA SW-846 Method 8260B**Sample Designations:**

| MW-16 | MW-101C | MW-102B | MW-114B |
|----------------|----------------|----------------|--|
| MW-101A | MW-101D | MW-102C | FD-2 (field duplicate of MW-102A) |
| MW-101B | MW-102A | MW-114A | Trip Blank |

The analytical data were reviewed in accordance with the analytical methods, SW-846 validation guidelines, and the Environmental Protection Agency (EPA) Contract Laboratory Program (CLP) National Functional Guidelines. The review included comparing quality control (QC) values provided on the laboratory QC forms to method QC criteria. Review of the raw data was not performed.

Quality Control Summary

| QC Review Item | VOA |
|---|------------|
| Completeness | X |
| Case Narrative | X |
| Chain of Custody (COC) Forms | X |
| Sample Preservation | X |
| Holding Times | X |
| Laboratory Blank Results | 1 |
| System Monitoring Compounds (Surrogate) Results | X |
| Matrix Spike/Matrix Duplicate (MS/MSD) Results | X |
| Laboratory Control Sample (LCS) Results | 2 |
| Method Specific Quality Control (QC) Results * | X |
| System Performance | 3 |
| Field Quality Control Results # | 4 |
| Other | X |

X Acceptable, no qualification necessary

NR Not required

See validation summary comment

NA Not applicable

*) The reviewer has indicated in the comments, if necessary, the method specific QC results included in the data package that were reviewed.

#) Field QC may include field duplicates, trip blanks, rinse blanks, field blanks, and equipment blank samples as required by project specific criteria.

Data for the above samples are:

Is action required by the Project Manager?

 Acceptable for useYes No Acceptable for use as qualified Unacceptable for use

Data Validation Summary Comments:

- 1. Laboratory Blank Results** – Three compounds were detected in the method blank for QC batch 1612610. The following table provides the detected compounds and qualifiers applied to the investigate results, if necessary.

| Compound | Method Blank Result ($\mu\text{g/l}$) | Affected Samples | Qualifier(s) |
|------------------|--|-----------------------------|--------------|
| Acetone | 2.3 J | FD2 & MW-102C | 20 UB |
| | | MW-101B | 100 UB |
| Bromomethane | 0.34 J | N/A | N/A |
| Carbon Disulfide | 0.24 J | MW-102B, MW-102C, & MW-114A | 5 UB |

Three compounds were detected in the method blank for QC batch 1612684. The following table provides the detected compounds and qualifiers applied to the investigate results, if necessary.

| Compound | Method Blank Result ($\mu\text{g/l}$) | Affected Samples | Qualifier(s) |
|---------------------|--|------------------|--------------|
| 1,4-Dichlorobenzene | 0.20 J | N/A | N/A |
| Carbon Disulfide | 0.27 J | N/A | N/A |
| Methylene Chloride | 0.27 J | MW-101A | 25 UB |
| | | MW-101C | 12 UB |

- 2. Laboratory Control Sample (LCS) Results** – The LCS for 1,2-Dibromo-3-chloropropane exceeded the upper control limit in QC batch 1612610. However, because 1,2-Dibromo-3-chloropropane was not detected in any associated investigative sample, qualification is not necessary.
- 3. System Performance** – The corresponding continuing calibration verification (CCV) sample for 1,2-Dibromo-3-chloropropane in QC batches 1612610 & 1612684 had a recovery that exceeded the upper control limit of the method. 1,2-Dibromo-3-chloropropane was not detected in any associated investigative sample; therefore, the non-detect results are qualified “UJ”.

The corresponding continuing calibration verification (CCV) sample for Carbon Disulfide in QC batches 1612610 & 1612684 had a recovery that exceeded the upper control limit of the method. The non-detect results are qualified “UJ” and detected results are qualified “J”. However, because the detected results for Carbon Disulfide were already qualified based on method blank contamination, further qualification is not necessary.

- 4. Field Quality Control Samples** – Two compounds were detected in the trip blank associated with the investigated samples for the sample delivery group (SDG) 1611486. The following table provides the detected compounds and qualifiers applied to the investigate results, if necessary.

| Compound | Method Blank Result ($\mu\text{g/l}$) | Affected Samples | Qualifier(s) |
|--------------|--|-------------------------|------------------|
| Acetone | 6.9 J | FD2, MW-102C, & MW-101B | N/A ¹ |
| Bromomethane | 0.35 J | N/A | N/A |

¹ These investigate samples were already qualified because of detections of acetone in the method blank.

The relative percent difference (RPD) is not necessarily calculated if both the primary and duplicate results are not five times greater than the reporting limit. However, the RPD between the investigative and duplicate samples was less than or equal to 19%. This value only considers the comparison of two concentrations reported above the reporting limit. Qualification is not necessary.

OVERALL ASSESSMENT OF DATA

The TriMatrix Work Order Report # 1611486 is 100 percent complete. The data usability is based on EPA's guidance documents. No problems were identified with reported data and analytical performance was within specified limits. The data are acceptable and meet the project's data quality objectives.

Remarks: (well condition, maintenance, etc...)

MW-203 was sampled with a portable low flow sampling pump. The permanent well pump installed in the well was removed by an unknown party.
